

React

4. ReactJS-HOL

Project structure :

Post.js

```
class Post {
  constructor(id, title, body) {
    this.id = id;
    this.title = title;
    this.body = body;
  }
}

export default Post;
```

Posts.js

```
import React, { Component } from "react";

class Posts extends Component {
  constructor(props) {
    super(props);
    this.state = {
      posts: []
    };
  }

  loadPosts() {
    fetch("https://jsonplaceholder.typicode.com/posts")
      .then(response => response.json())
      .then(data => {
        this.setState({
          posts: data
        });
      });
  }

  componentDidMount() {
    this.loadPosts();
  }

  componentDidCatch(error, info) {
    alert("An error has occurred in the component.");
    console.error(error);
    console.error(info);
  }

  render() {
    return (
      <div>
```

```
29         {this.state.posts.map((post:T) => (
30             <div key={post.id}>
31                 <h2>{post.title}</h2>
32                 <p>{post.body}</p>
33                 <hr />
34             </div>
35         )]}
36     </div>
37 );
38 }
39 }
40 export default Posts; Show usages new *
```
